

This email is in regard to the National Association of Broadcasters petition 04-160 which is trying to limit local information broadcasted on satellite radio. I have a subscription to XM Radio and it is a huge benefit since I live in a part of the country where ordinary radio does not always have good reception or sometimes none at all. Limiting local information such as weather could keep me from being notified with enough time to act should a severe thunderstorm occur. Please deny the NAB's attempt to block satellite radio from broadcasting such crucial information. Thank you for your time.
